

## EQ Web Sort with Email Responses

1. Set up everything in your project with the Configurator as normal.
2. After everything is setup, open the config.xml file in the settings folder using TextEdit software in macOS or Notepad in Windows. (Do not use Microsoft Word). Edit the "firebaseOrLocal" entry to be "email".

```
1 <?xml version="1.0" encoding="UTF-8"?>
2
3
4 <config version="1.0" htmlParse="false">
5
6 <!-- GENERAL SETTINGS -->
7 <!-- options: firebase, local, or sheets -->
8 <item id="studyTitle">My_Q_project</item>
9 <item id="setupTarget">sheets</item>
10 <item id="firebaseOrLocal">email</item>
11 <item id="steinApiUrl">https://api.steinhq.com/v1/storages/636742d5ec
12
13 <item id="emailAddress">banasick@gmail.com</item>
14 <item id="emailSubject">EQ Websort Results</item>
15 <item id="clipboardText">Copy to Clipboard</item>
```

3. Next, Add the three entries with id "emailAddress", "emailSubject", and "clipboardText" to the file using your email destination address and your texts. Save the file and you're ready to upload everything to the web host.

The emailed results will look like this:
